

I believe this gives us an advantage over investors who rely only on traditional measures of risk and valuation. More importantly, it allows us to stay abreast of all new innovations and trends in investing.

Disclosures

This commentary is accurate as of its publication date (10/15/2019) and has not been updated since its original release.

This document is provided for informational purposes only and should not be construed as investment advice or an offer or solicitation to buy or sell securities. We discuss general market activity, industry or sector trends, or other broad-based economic or market conditions and this should not be construed as research, securities recommendations or investment advice. Investors are urged to consult with their financial advisors before buying or selling any securities. Any forecasts or predictions are subject to high levels of uncertainty that may affect actual performance. Accordingly, all such predictions should be viewed as merely representative of a broad range of possible outcomes.

No client or prospective client should assume that any information presented in this document serves as the receipt of, or a substitute for, personalized individual advice from New Age Alpha or any other investment professional. Any charts, graphs or tables used in this fact sheet are for illustrative purposes only and should not be construed as providing investment advice and should not be construed by a client or a prospective client as a solicitation to effect, or attempt to effect transactions in securities, or the rendering of personalized investment advice.

Human Factor™ "h-factor" scores measure the probability that, according to the Human Factor algorithm, a company will deliver the growth necessary to support its stock price and are not alone a recommendation about how to invest. The h-factor is a risk that comes from humans interpreting vague or ambiguous information in a systematically incorrect way. We believe that the h-factor causes stocks to be mispriced. We measure how the h-factor affects stock prices to identify which stocks are over or underpriced. We apply our methodology to over 4000 stocks and global indexes to identify a risk that impacts stock prices and is caused by human behavior. Investments not included in the h-factor tool may have characteristics similar or superior to those being analyzed. The accuracy of the h-factor is materially reliant on the integrity of the information utilized in the calculations, including any assumptions and or interpretations made by the user about the data. Data discrepancies, user assumptions, and data input by user can all contribute to differing outcomes. The underlying assumptions and processes presented herein are subject to change. Furthermore, any h-factor score referenced herein is a snapshot taken at a particular point in time and any analysis or information contained in such score is outdated and should not be relied upon as investment advice as such information may have materially changed since publication.

OWNERSHIP OF ANY COMPANIES MENTIONED

The discussion of any companies mentioned in this document is not an endorsement of any company or a recommendation to buy, sell or hold any security. The views stated herein are only current through the date stated and are subject to change at any time based on market or other conditions and New Age Alpha disclaims any responsibility to update such views. New Age Alpha may own positions in any company mentioned. New Age Alpha typically holds securities in its portfolio only if it becomes part of the established universe of eligible securities that are part of each specific investment strategy (e.g. the S&P 500®). It is important to note that there can be no guarantee that the application of the h-factor to investment portfolios or certain stocks or securities can produce profitable results.
